RENEWED PETITION UNDER 37 C.F.R. § 1.47(a)

Dear Sir:

This Renewed Petition Under 37 C.F.R. § 1.47(a) is being submitted in response to the Decision on Petition of August 27, 2004 for the above-identified application. A reply to the Decision is due October 27, 2004.

As indicated on page 3 of the Decision, a reply may include a declaration executed by the non-signing inventor. Applicant is submitting herewith the executed Declaration and Petition for Reissue Application signed by the non-signing inventor, Dr. Vernon G. Wong. Also enclosed is an executed Offer to Surrender signed by Dr. Vernon G. Wong.

In view of the above, applicant submits that this Renewed Petition under 37 C.F.R. § 1.47(a) properly and fully responds to the Decision, and that all requirements for filing the above-

I have reviewed and understand the contents of the specification, including the claims of the specification, and the claims as presented by the preliminary amendment enclosed herein. I believe that no new matter has been added by the changes set forth in this reissue application.

In accordance with 35 U.S.C. § 251, it is submitted that the original patent is partially inoperative for claiming less than the patentee had a right to claim in the patent.

Lines 1-3 of original claim 1 recite "a method for improving the post-operative success of glaucoma filtration surgery". This language may render the patent partially inoperative for claiming less than the patentee had a right to claim in the patent.

Lines 4-8 of original claim 1 recite "introducing proximal to the surgical site an implant comprising dexamethasone at a concentration from about 40 to 80 weight percent of the implant and poly-lactate glycolic acid copolymer at a concentration of at least 20 weight percent of the implant". This language may render the patent partially inoperative for claiming less than the patentee had a right to claim in the patent.

Lines 9-12 of original claim 1 recite "said therapeutically active agent is released within a therapeutic dosage which does not vary by more than about 100% for a period of at least about 3 weeks". This language may render the patent partially inoperative for claiming less than the patentee had a right to claim in the patent.

Lines 1-3 of original claim 14 recite "a method for improving the post-operative success of glaucoma filtration surgery". This language may render the patent partially

inoperative for claiming less than the patentee had a right to claim in the patent.

Lines 4-10 of original claim 14 recite "introducing proximal to the surgical site an implant comprising dexamethasone at a concentration from about 40 to 80 weight percent of the implant and poly-lactate glycolic acid copolymer having a relative average molecular weight between about 10 and about 60 kD at a concentration of at least about 20 weight percent of the implant". This language may render the patent partially inoperative for claiming less than the patentee had a right to claim in the patent.

Lines 11-14 of original claim 14 recite "said therapeutically active agent is released with a therapeutic dosage which does not vary by more than about 100% for a period of at least about 3 weeks". This language may render the patent partially inoperative for claiming less than the patentee had a right to claim in the patent.

Lines 1-3 of original claim 18 recite "a method for improving the post-operative success of glaucoma filtration surgery". This language may render the patent partially inoperative for claiming less than the patentee had a right to claim in the patent.

Lines 4-12 of original claim 18 recite "introducing proximal to the surgical site an implant comprising a therapeutically effective agent at a concentration from about 10 to 50 weight percent of the implant, and at least one pharmacologically acceptable biodegradable polymer having a relative average molecular weight between about 10 and 60 kD at a concentration of at least about 20 weight percent of the implant". This language may render the patent partially

inoperative for claiming less than the patentee had a right to claim in the patent.

Lines 13-16 of original claim 18 recite "said therapeutically active agent is released with a therapeutic dosage which does not vary by more than about 100% for a period of at least about 3 weeks". This language may render the patent partially inoperative for claiming less than the patentee had a right to claim in the patent.

All errors which are being corrected in this reissue application up to the time of filing of this declaration arose without any deceptive intention on the part of myself.

I respectfully request that I may be allowed to surrender the original patent and that Letters Patent may be reissued to me for the same invention upon the above-identified specification.

I hereby appoint as my attorneys and/or agents
